

The blockchain is the gateway to Web 3.0: the promise of security, privacy, ownership, and control, supported through a decentralized platform. But most people will ignore it unless it's also convenient and easy to use. So Daplie is helping bring Web 3.0 to life by building a cryptographically secure ecosystem where *anyone* can experience the benefits of the blockchain in their home.

Our plug-and-play decentralized home server—Connect™—sits at the center of this ecosystem. It features the first built-in hot and cold storage wallets, with secure data access from anywhere and from any connected device. It also has the power to extend most Dapps onto a phone or computer, without sacrificing your devices' processing power. Connect integrates with the blockchain through the DapStore: an easy-to-use marketplace where users can discover and share the best Dapps and legacy applications. And tying it all together is DapCoin—an ERC20 utility token used to publish, purchase, and review Dapps within the DapStore.

Together Connect, DapStore, and DapCoin create a truly decentralized platform where you can own and control your digital assets and private information. Plus backing it all up is Daplie's 3 years of product development, real hardware, thousands of existing backers, and a talented team led by CEO and visionary Bryson Hill.

To support the growth of this ecosystem Daplie will be launching a **token sale** for DapCoin (DAP) in April of 2018. More details can be found in the coming weeks via dapcoin.com and our Telegram channel, including details of our killer referral program launching soon!

Connect: Bringing the Blockchain Home

DEPENDABLE HARDWARE

Run your Dapps with 2gb RAM, multi-core ARM CPU, 2x ethernet, 2x USB

EXPANDABLE STORAGE

Stack up to 4 Daplie hard drives for 8 terabytes of decentralized, always-on storage, or use your own USB drives

PRIVATE KEY MANAGEMENT

One location to manage all your private keys—from anywhere and from any device—featuring our exclusive built-in cold wallet
